

How to Use Your New Lightroom Presets

Thank you so much for downloading Lightroom Presets from Go Media's Arsenal!
Here's how to get started:

1. Open Lightroom
2. File > Import Photos and Videos
Once you've chosen the photo/design you'd like to edit...
3. Click on the 'Develop' Tab
4. On the left, under 'Presets,' find the '+' sign.
5. From the drop-down, choose 'Import Presets.'
6. Navigate to your downloads folder, or wherever you saved your new presets.
7. Your new presets will begin to populate, one by one, under "User Presets."

Please note that presets will help you get your photo close to where you want it to look, but you will often need to do some minor adjusting in Lightroom to make them perfect.

We hope you find that they are very useful!
